Duration	14 mins 59 secs
Correct	Given an array of numbers, find the index of the smallest array element (the pivot), for which the sums of all elements to the left and to the right are equal. The array may not be reordered.
	Example
	arr=[1,2,3,4,6]
	• the sum of the first three elements, 1+2+3=6. The value of the last element is 6.
	Using zero based indexing, arr[3]=4 is the pivot between the two subarrays. The index of the private is 2. The index of the private is 2. The index of the private is 2. The index of the private is 2.
	· The index of the pivot is 3.
	Function Description
	Complete the function balancedSum in the editor below.

Status Finished

int arr[n]: an array of integers

Returns:

Constraints

int: an integer representing the index of the pivot

balancedSum has the following parameter(s):

 $3 \le n \le 10^5$

 $1 \le arr[i] \le 2 \times 10^4$, where $0 \le i < n$

It is guaranteed that a solution always exists.

Input Format for Custom Testing

Input from stdin will be processed as follows and passed to the function.

The first line contains an integer n, the size of the array arr.

Each of the next n lines contains an integer, arr[i], where $0 \le i < n$.

Sample Case 0 Sample Input 0

STDIN Function Parameters
$4 \rightarrow arr[] size n = 4$
1 → arr = [1, 2, 3, 3]
2
3
3
Sample Output 0
2
Explanation 0
• The sum of the first two elements, 1+2=3. The value of the last element is 3.
 Using zero based indexing, arr[2]=3 is the pivot between the two subarrays.
· The index of the pivot is 2.
Sample Case 1

STDIN Function Parameters

```
Function Parameters
STDIN
     \rightarrow arr[] size n = 3
     \rightarrow arr = [1, 2, 1]
Sample Output 1
Explanation 1
      The first and last elements are equal to 1.
      Using zero based indexing, arr[1]=2 is the pivot between the two subarrays.
      The index of the pivot is 1.
Answer: (penalty regime: 0 %)
  Reset answer
           Complete the 'balancedSum' function below.
        * The function is expected to return an INTEGER.
        * The function accepts INTEGER ARRAY arr as parameter.
```

```
1 + /*
     * Complete the 'balancedSum' function below.
     * The function is expected to return an INTEGER.
 4
     * The function accepts INTEGER ARRAY arr as parameter.
     */
 6
    int balancedSum(int arr_count, int* arr) {
        int a=0,b=0;
 9
        for (int i=0;i<arr_count;i++){
10 +
            b+=arr[i];
11
12
        for(int i=0;i<arr_count;i++){</pre>
13 +
            if(a==b-arr[i]){
14 +
15
                return i;
16
17
            a+=arr[i];
            b-=arr[i];
18
19
20
        return 1;
21
22
```

	Test	Expected	Got	
~	<pre>int arr[] = {1,2,3,3}; printf("%d", balancedSum(4, arr))</pre>	2	2	~

Question 2 Correct	Calculate the sum of an array of integers.
₹ Flag question	Example
	numbers = [3, 13, 4, 11, 9]
	The sum is $3 + 13 + 4 + 11 + 9 = 40$.
	Function Description
	Complete the function arraySum in the editor below.
	arraySum has the following parameter(s): int numbers[n]: an array of integers
	Returns int: integer sum of the numbers array
	Constraints
	$1 \le n \le 10^4$ $1 \le \text{numbers}[i] \le 10^4$

Input Format for Custom Testing

Input from stdin will be processed as follows and passed to the function.

The first line contains an integer n, the size of the array numbers.

Each of the next n lines contains an integer numbers[i] where $0 \le i < n$.

Sample Case 0

Sample Input 0

STDIN Function

→ numbers[] size n = 5 \rightarrow numbers = [1, 2, 3, 4, 5]

2

Sample Output 0

4 5

```
Explanation 0
1 + 2 + 3 + 4 + 5 = 15.
Sample Case 1
Sample Input 1
STDIN Function
     \rightarrow numbers[] size n = 2
     → numbers = [12, 12]
12
Sample Output 1
24
Explanation 1
12 + 12 = 24.

Question 3
                                           Given an array of n integers, rearrange them so that the sum of the absolute differences of all adjacent elements is minimized. Then, compute
Correct
                                           the sum of those absolute differences. Example n = 5 arr = [1, 3, 3, 2, 4] If the list is rearranged as arr' = [1, 2, 3, 3, 4], the absolute differences
                                           are \begin{vmatrix} 1 - 2 \end{vmatrix} = 1, \begin{vmatrix} 2 - 3 \end{vmatrix} = 1, \begin{vmatrix} 3 - 3 \end{vmatrix} = 0, \begin{vmatrix} 3 - 4 \end{vmatrix} = 1. The sum of those differences is 1 + 1 + 0 + 1 = 3. Function Description Complete the function
